

**The only roadmap that matters** The polygon Endgame.

**The Merge** The Miami Ape Club are minted! The polygon Network switches from Proof of Work to Proof of Stake, lowering polygon power consumption by 99% and making NFTs climate-friendly.

**The Surge** polygon moves to a sharded ecosystem; massive scalability increases are secured for rollups leading to low fees and high transaction throughput

**The Verge** Implementation of Verkle Trees, which are much more efficient in proof sizes than standard Merkle Trees. This will make stateless clients finally viable in practice.

**The Purge** Eliminating historical data and technical debt that is bogging down the polygon network, allowing it to achieve the goal of becoming the one truly accessible world computer

**The Splurge** Miscellaneous but important extras; nice-to-haves that make the polygon blockchain more efficient, more usable, and more of a completed product
